MR. TODO

One Task, Three Points of View

A single real task, followed end-to-end through the customer, the Personal Manager, and the admin dashboard — the same event, seen from all three sides of the marketplace.

PREPARED FOR THE MR. TODO TEAM
September 2026

THE TASK AT A GLANCE

Fix leaking kitchen tap + reseal joint

CATEGORY	CUSTOMER	PERSONAL MANAGER
Handyman · Plumbing	**Priya Sharma**	**Rakesh Kumar · 4.9 rating**
LOCATION	**SCHEDULED**	**JOB VALUE**
Flat 4B, Kandivali West	**26 Aug, 11:00 AM**	**Rs. 650 (PM earns Rs. 520)**

"Tap has been dripping for 2 days, water pooling under the sink. Might need a new washer." — the note Priya left when she posted the task.

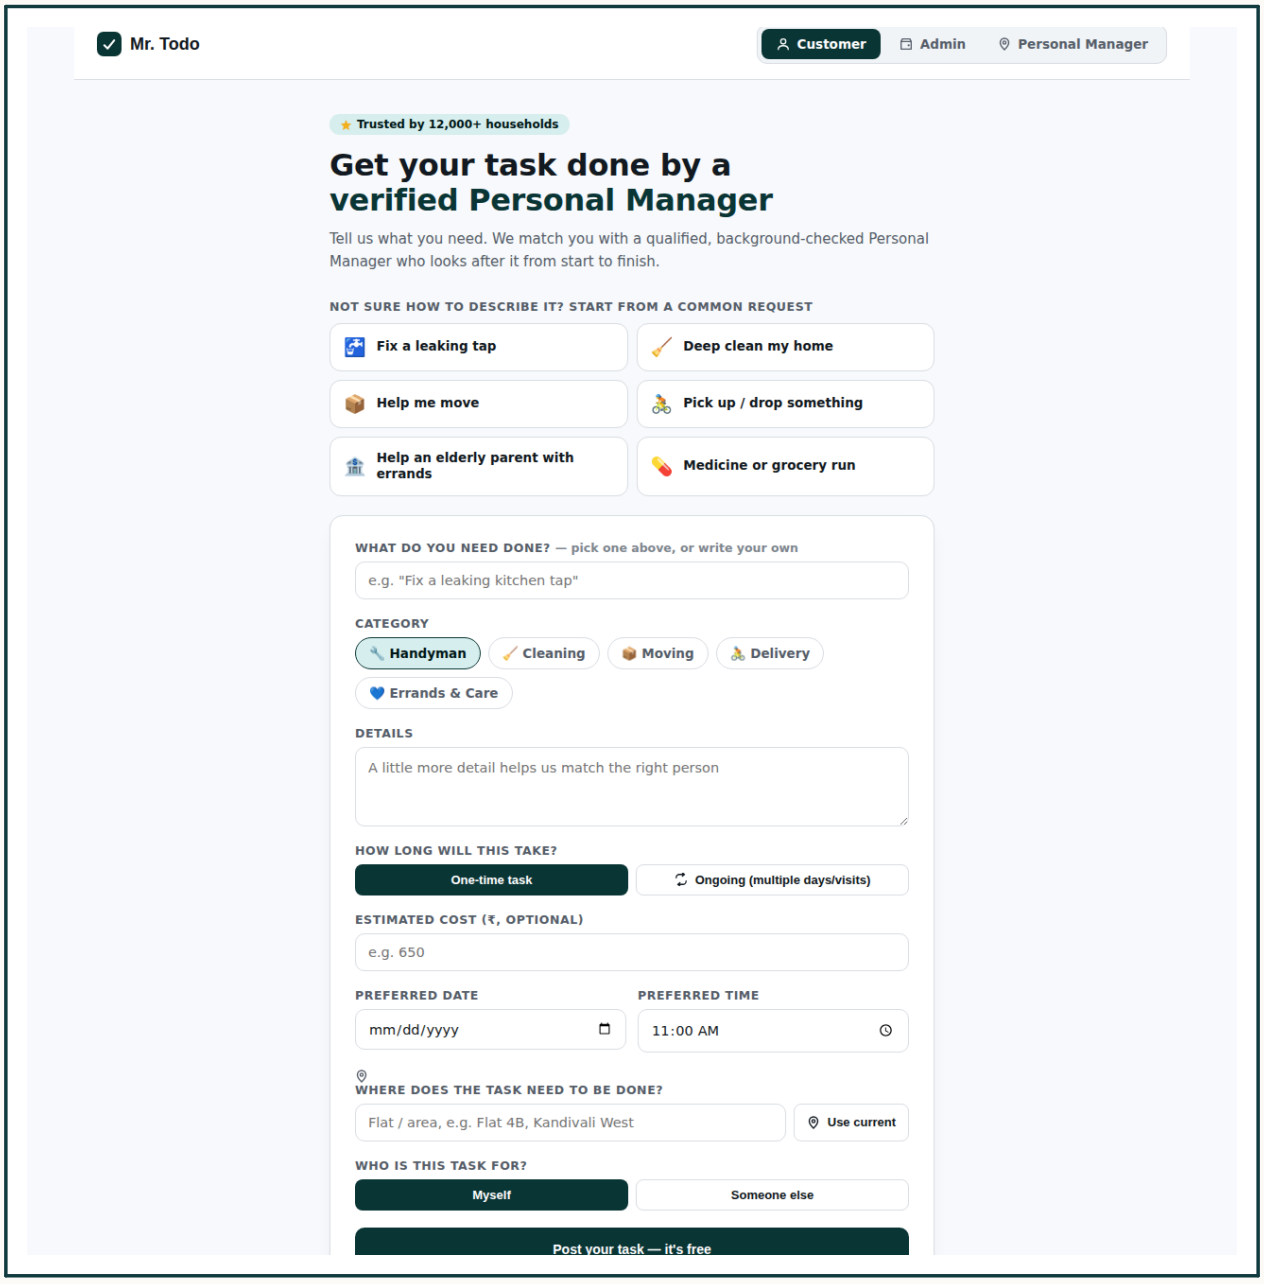

The six pages that follow walk this exact task through the customer app, the admin dashboard, and the Personal Manager app — showing what each side sees and does, in order, as one job moves from a tap on a phone screen to a fixed kitchen tap.

The customer posts the task

1

CUSTOMER POV

Priya opens Mr. Todo, picks **“Fix a leaking tap”** from the quick-pick list (or could type her own), confirms the category, adds a short description, and sets her location and preferred time.

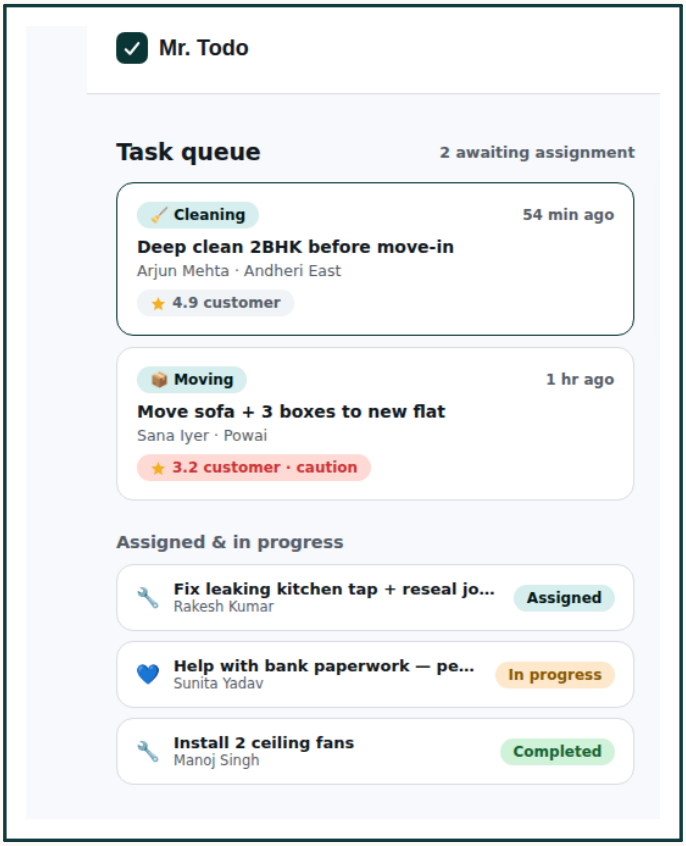

The customer posting screen — category, details, timing, and location, all in one flow.

Admin matches a Personal Manager

2

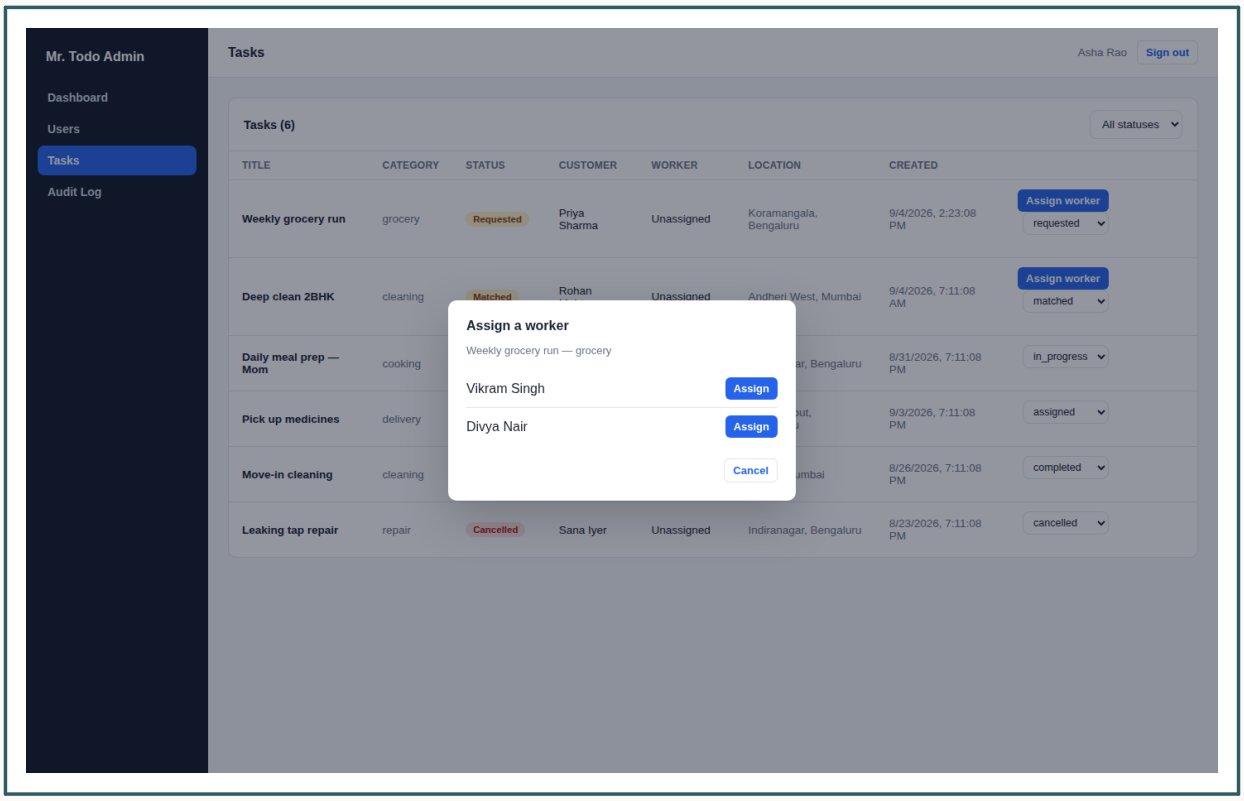

ADMIN POV

The task lands in the admin dashboard's task queue. An admin opens it and sees a ranked shortlist of candidates — filtered by category, distance, and rating — and assigns one with a single click. Here, that's exactly how Rakesh Kumar, a 4.9-rated plumber 4.2 km away with 214 completed jobs, was matched to Priya's task.

The admin queue: Priya's task is now Assigned to Rakesh Kumar (highlighted).

This is the same assignment mechanism verified live in the shipped admin app — pick any unassigned task, review the suggested Personal Managers, and confirm:

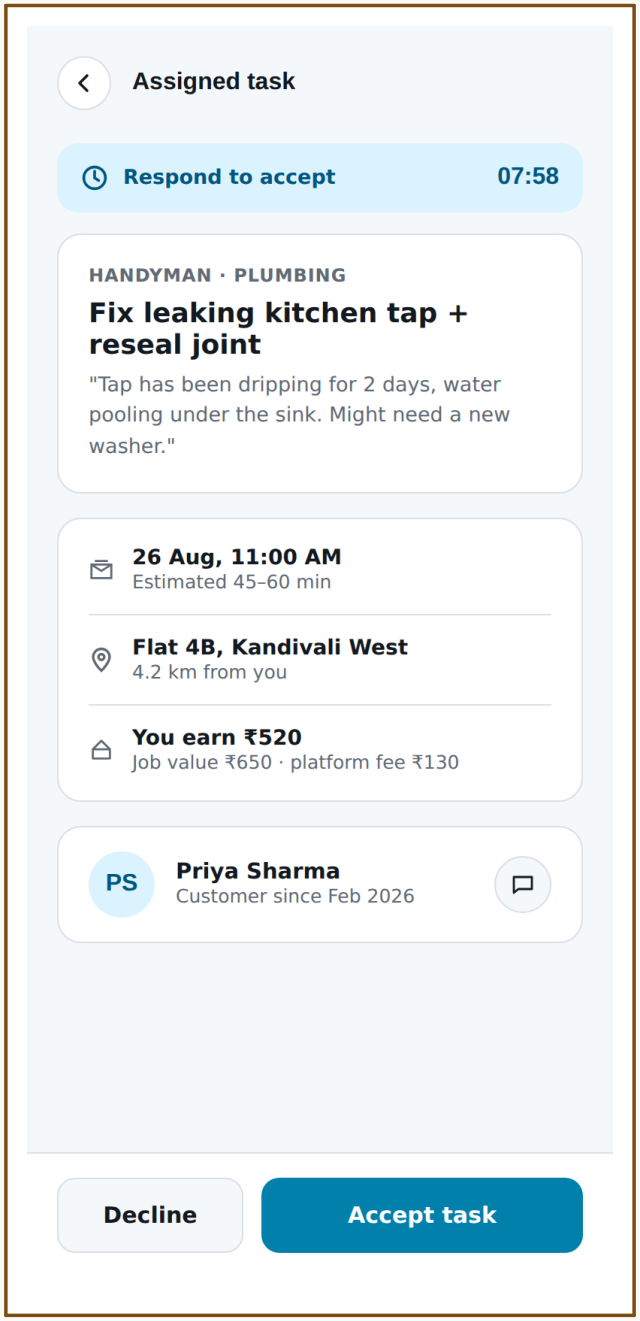

The live admin app's Assign-worker dialog — the actual production feature behind this step.

The Personal Manager reviews and accepts

3

PERSONAL MANAGER POV

Rakesh gets a push notification the moment he's assigned. He has a short window to open it, review the job, and tap **Accept task** — or it's automatically reassigned to someone else, keeping the queue moving.

Rakesh's task detail screen — what to do, where, when, what he'll earn, and who the customer is.

The customer sees it's confirmed

4

CUSTOMER POV

Back on Priya's phone, the task on her home screen updates automatically — no refresh needed — from *Requested* to **Assigned**, the moment Rakesh accepts.

Priya's "Your recent tasks" card, now showing the job as Assigned.

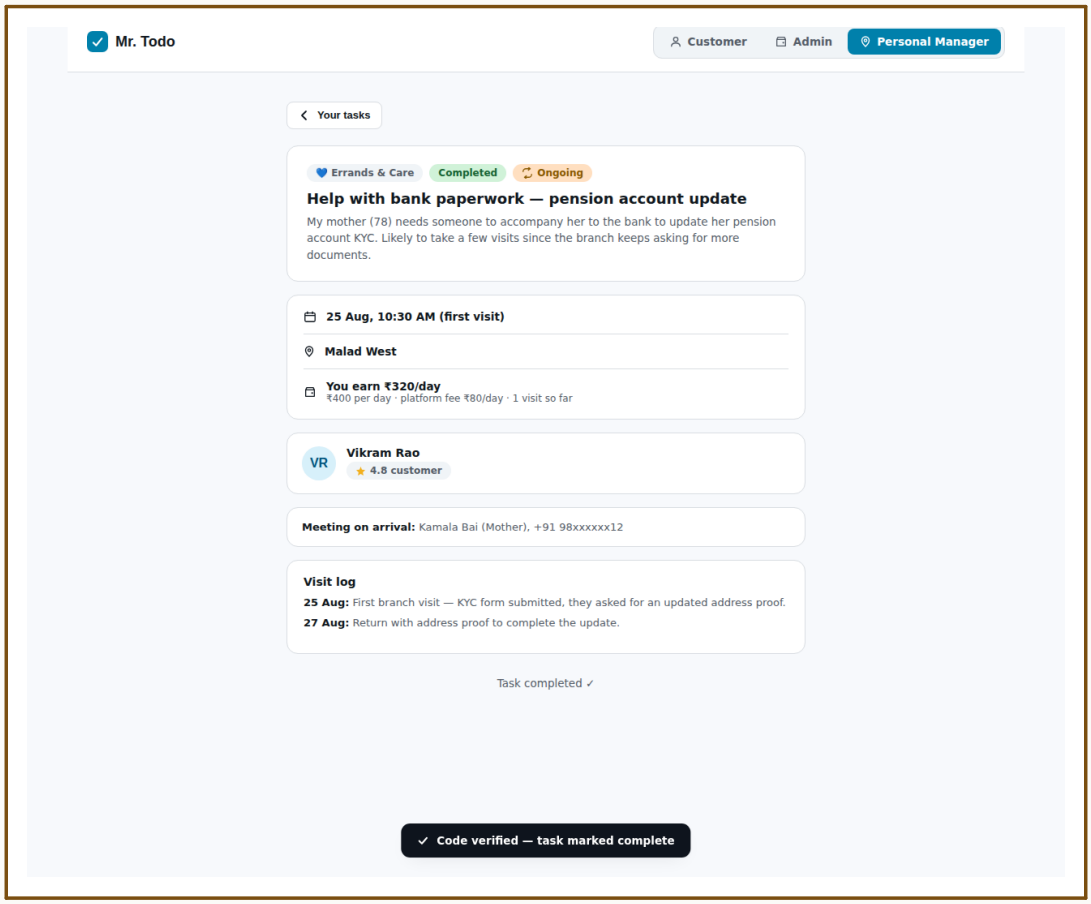

This is the core trust loop of Mr. Todo: every status change on one side of the marketplace shows up instantly on the other two, with no manual syncing and no stale data.

The Personal Manager finishes the job

5

PERSONAL MANAGER POV

On site, Rakesh marks the task **In Progress**, does the work, and — once Priya confirms it's done — asks her for her 4-digit completion code and enters it to close out the job. That in-person code confirmation is the same completion flow shown below (captured here with a different sample task, same screen and logic).

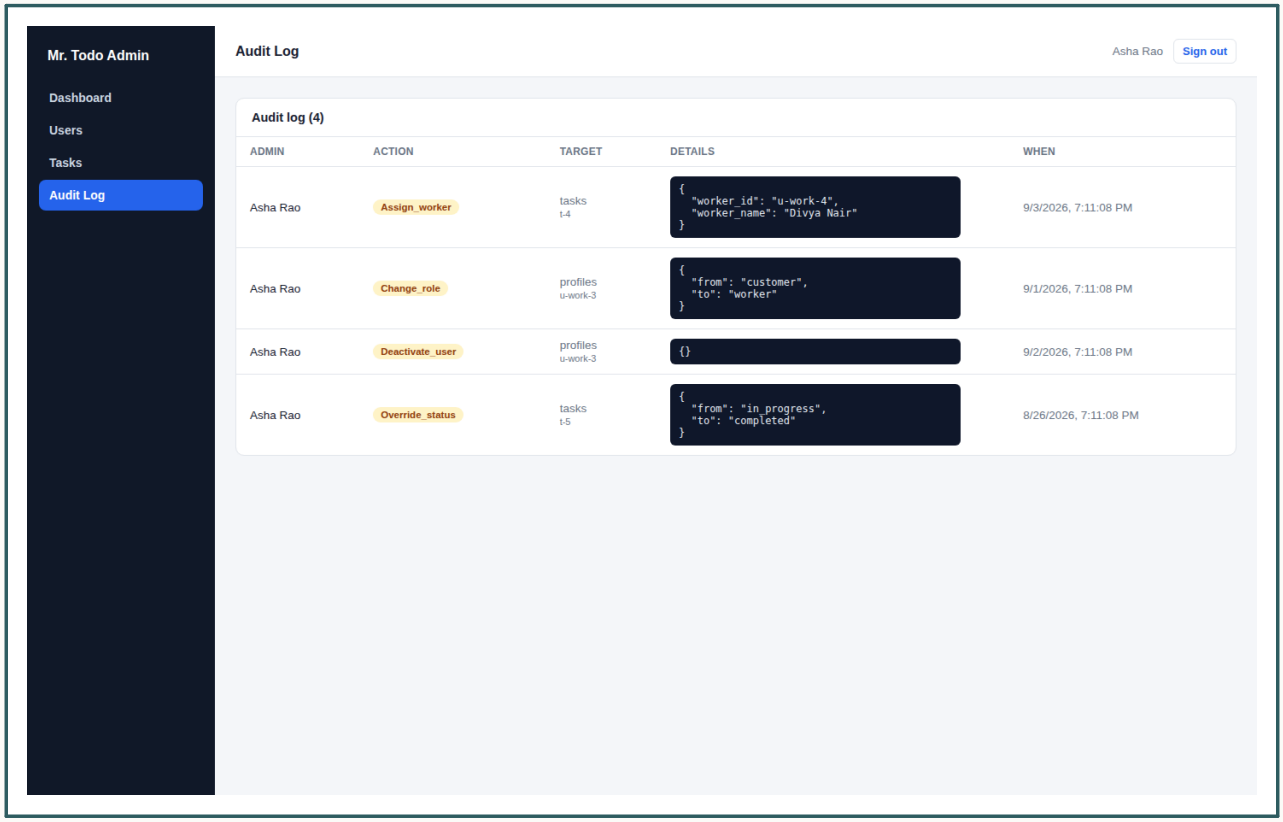

The completion screen: a Personal Manager enters the customer's code to mark a job fully done.

Admin sees the complete record

6

ADMIN POV

Nothing about this task happened off the record. The live admin app's Audit Log captures every step an admin took — and the Dashboard and Tasks pages reflect the task's final state — automatically, with no manual logging.

The live admin app's Audit Log — a permanent, timestamped record of every admin action on the platform.

One task. Three views. Zero gaps between them — that consistency, end to end, is what makes Mr. Todo's admin-in-the-loop model workable at scale.
